Letter of recommendation for Luc Castelain

DOSIsoft, a company specializing in software products for Radiotherapy and Nuclear Medicine, is developing an integrated solution for planning and dosimetry for radionuclide therapies. Its vocation is to be the platform that collects data from an internal radiotherapy treatment, allows planning and performs the associated dosimetry calculation. Liver cancers and neuroendocrine tumors are the targets of this application in nuclear medicine and molecular imaging.

As part of his Technician internship at the Ecole Nationale D'ingénieurs de Brest, Luc Castelain intervened to participate in the improvement and software development of the functionalities for creating and editing a clinical report within the software product PLANET Onco Dose dedicated to the visualization and quantification of nuclear medicine image series.

Luc Castelain showed seriousness, method and autonomy throughout his internship on a sometimes delicate subject and I highly recommend him to carry out his assistant engineer internship as part of the pursuit of his school curriculum.

Pascal Pineau

A handwritten signature in black ink, appearing to be "P. Pineau", with a stylized flourish at the end.
